Spring Forward-Check Your Smoke Alarms

Camino – “Smoke Alarms Saves Lives. It is your first line of defense in a structure fire especially since most home fires start in the middle of the night when you are sleeping” says CAL FIRE’s Amador-El Dorado Unit Chief Mike Kaslin. “In the event of a fire, properly installed and maintained smoke alarms can save your life by alerting you and your family and giving you time to escape. Since everyone will be setting their clocks ahead one hour on Saturday night before going to bed, take the time to check your smoke alarms and practice your exit drill adds Chief Kaslin.

Some facts about smoke alarms:

Photoelectric Smoke Alarms are better at sensing “smoldering fires” because smoldering fires produce large smoke particles. A smoldering fire may burn for hours before bursting into a flaming fire. Often these fires are caused by a cigarette, dropped match or stick of incense burning in a couch or in bedding.

Ionization Smoke Alarms are better at sensing small smoke particles which are usually produced by a flaming fire that is burning items fast and spreading throughout an area very quickly. This may be a grease fire or a garbage can that caught fire. If your current smoke alarm goes off when you cook consider replacing that alarm with a photoelectric smoke alarm and placing the other ionization alarm away from your kitchen.

Never disable a smoke alarm. Never remove the battery from your smoke alarm. National statistics indicate that 66% of people who died in house fires did not have a smoke alarm or the smoke alarm they had was not working. Consider interconnecting your smoke alarms, although this is more expensive, this would allow one smoke alarm to “talk” to the others by a hardwired system or wireless technology. If one alarm senses smoke it will relay the information and all the alarms in the home will go off making sure everyone is aware of a problem and allow them to safely exit the home. “The best scenario is to make sure you have a linked smoke alarm in *each* bedroom, outside the sleeping area(s) and on each level of the home. Follow the manufacturer’s instructions when installing the smoke alarm, test the battery monthly and change the battery once a year. Don’t forget to vacuum the smoke alarms since dust and bugs can cause false alarms Don’t forget to replace

the smoke alarms every 8-10 years; just because the light is on does NOT mean it will work properly” reminds Chief Kaslin.

For households with hearing impaired family members, there are smoke alarms designed to meet the needs of these individuals. The systems utilize extra loud (90dB) signaling combined with a bright strobe light to alert sleeping individuals and/or vibrating pager systems that transmit to hardware placed on bed frames, under pillows or to specialized wrist watches. Check the yellow pages under “fire protection services” to purchase this specialized equipment and make sure to get competitive bids.

If your household includes children, some studies suggest that smoke alarms that allow a parent to record their voice instead of the common “beep” alarm work better at rousing children from stage 4 deep sleep. Although they are more expensive, it is cheap insurance in the event of a house fire. Don’t forget to practice your exit drills several times a year, during the day and at night with all of your family members. If you need more information on exit drills or other fire and life safety topics, please visit CAL FIRE’s website at www.fire.ca.gov or call 530.644.2345 and information will be mailed to you FREE of charge.
