Subject: Forest Carbon Plan

I have the following comments on the subject plan.

1. The plan should ensure safety from potential wildfire. Fuel reduction should be done in a planned manor based on providing proteection for larger trees which will sequester more greenhouse gas emmissions.
2. Thinned materials should be used as an energy source in a manor to minimize ghg emissions, and used as a source of mulch,
- 3.The plan should prioritize forest diversity and adaptation increased air tempetures..
4. The plan should emphasize management practices that minimize energy use.
5. Plan should include measures for retention and conservation of water.
6. Plan should consider species selection based on carbon sequestration capability.

Thank you for your consideration.

Sincerely
Rick Bettis
