**Subject:** Comments on Draft California Forest Carbon Plan

Dear Forest Climate Action Team:

California's forests are our greatest weapon in the battle to curb the devastating impacts of climate change. The Draft California Forest Carbon Plan relies too heavily on false assumptions, and proposes actions that will only allow continuance of business-as-usual on our vital private forestlands. Please revise the Plan to ensure that emphasis is placed on keeping green trees storing more carbon and for longer. Please revise the Plan to ensure that regional implementation takes into account the unique opportunities afforded by our coastal redwood forests. Please revise the Plan to ensure that forestry practices on private lands build upon the opportunities instead of continuing to add to the monumental challenges of climate change and make them worse.

Sincerely,

Suzanne Remien
